The continuing education programme “Rock Engineering for Deep Mines” addresses the shortage of rock engineering personnel in the European mining industry. The emphasis of the education programme is on the application of rock engineering principles in the mining industry in order to make deep mining operations safer and more efficient. It provides the participants with the basic knowledge and skills required to address and solve practical rock engineering problems.

This programme is specifically directed at:

- mining engineers
- governmental organisations responsible for supervision of mining activities
- public authorities
- consulting companies in the field of mining, having to deal with rock pressure problems
- personnel employed in the mining industry
- geologists

Main research: Mining economics and policies
